

## Cleaning Your Glass

- 1) Get two white terry towelling cloths and some normal household window cleaner.
- 2) Spray Window cleaner all over, and use 1 of the terry towelling cloths in small circular motions to get an all over equal finish.
- 3) Use the 2nd dry terry towelling cloth to buff up.
- 4) If you have marks in your etched glass from silicone or adhesive! It can prove hard to get them out! We would recommend doing a pre clean with some cif cream cleaner (bathroom cleaner) this has a slight abradent in the formula this may help to get the stubborn marks out! After you have used the cif please repeat the cleaning process.
